# Attempts have been made

John Canny, "A Computational Approach to Edge Detection", IEEE TPAMI 1986

# Data-Driven Approach

1. Collect a dataset of images and labels
2. Use Machine Learning to train a classifier
3. Evaluate the classifier on new images

Example training set

```
def train(images, labels):  
    # Machine learning!  
    return model
```

```
def predict(model, test_images):  
    # Use model to predict labels  
    return test_labels
```

**airplane**

**automobile**

**bird**

**cat**

**deer**

# First classifier: Nearest Neighbor

```
def train(images, labels):  
    # Machine learning!  
    return model
```

→ Memorize all  
data and labels

```
def predict(model, test_images):  
    # Use model to predict labels  
    return test_labels
```

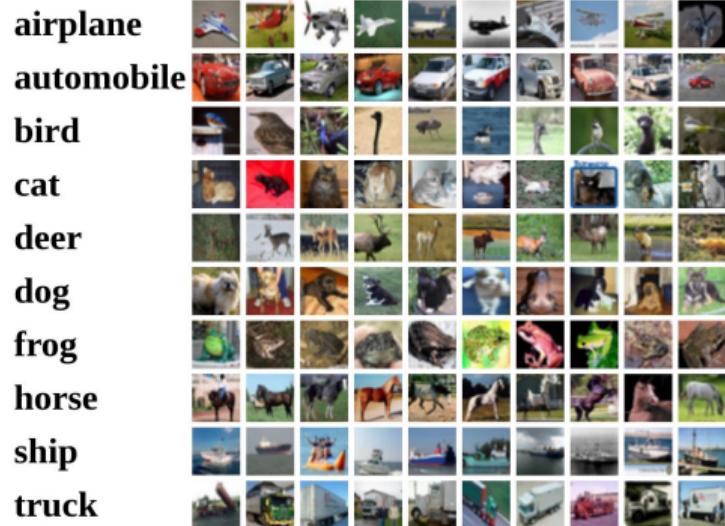

→ Predict the label  
of the most similar  
training image

# Example Dataset: CIFAR10

10 classes

50,000 training images

10,000 testing images

Alex Krizhevsky, "Learning Multiple Layers of Features from Tiny Images", Technical Report, 2009.

# Example Dataset: CIFAR10

10 classes

50,000 training images

10,000 testing images

airplane

automobile

bird

cat

deer

dog

frog

horse

ship

truck

Test images and nearest neighbors

Alex Krizhevsky, "Learning Multiple Layers of Features from Tiny Images", Technical Report, 2009.

# k-Nearest Neighbor on images **never used**.

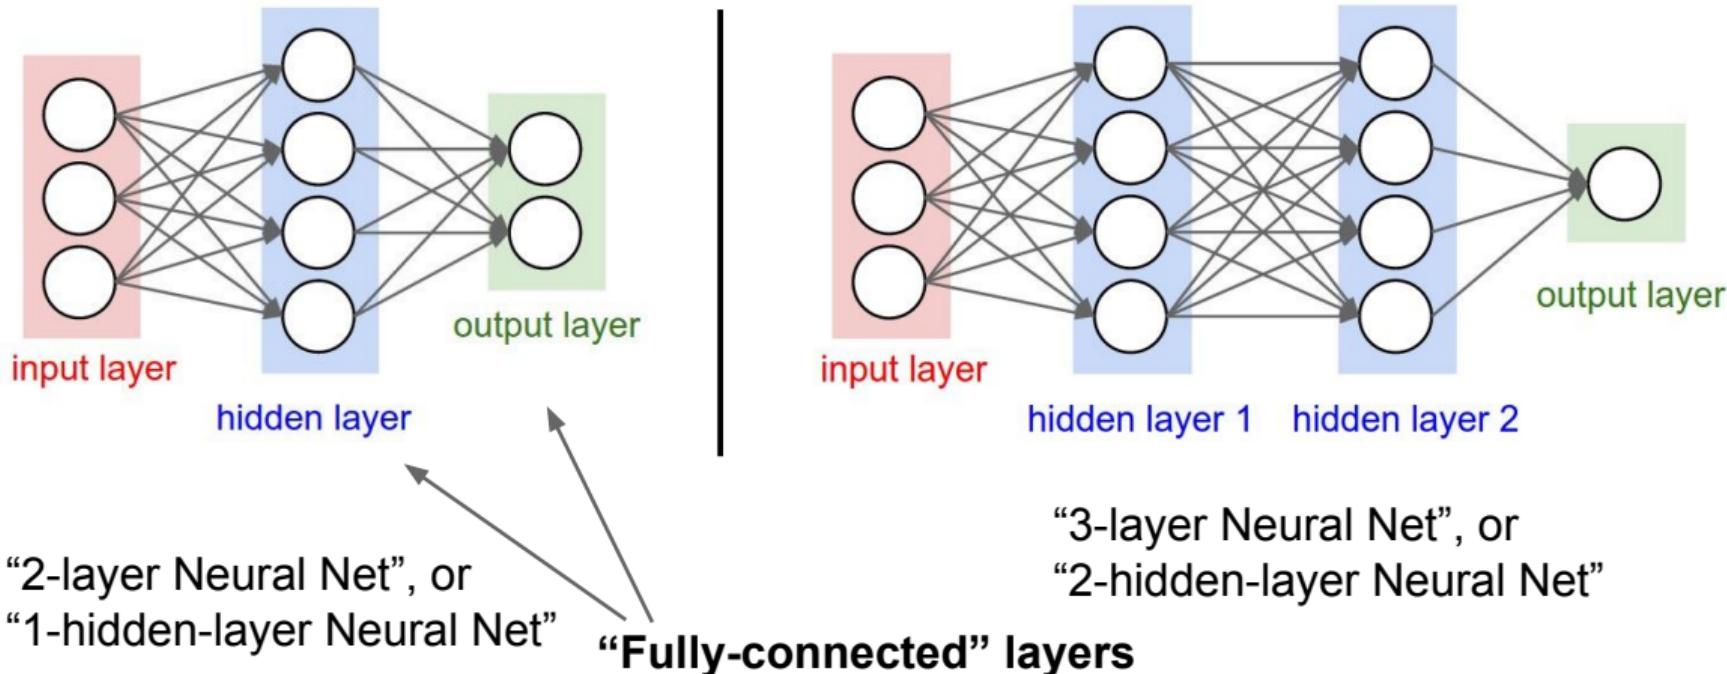

- Very slow at test time
- Distance metrics on pixels are not informative

(all 3 images have same L2 distance to the one on the left)

# Convolution Layer

consider a second, green filter

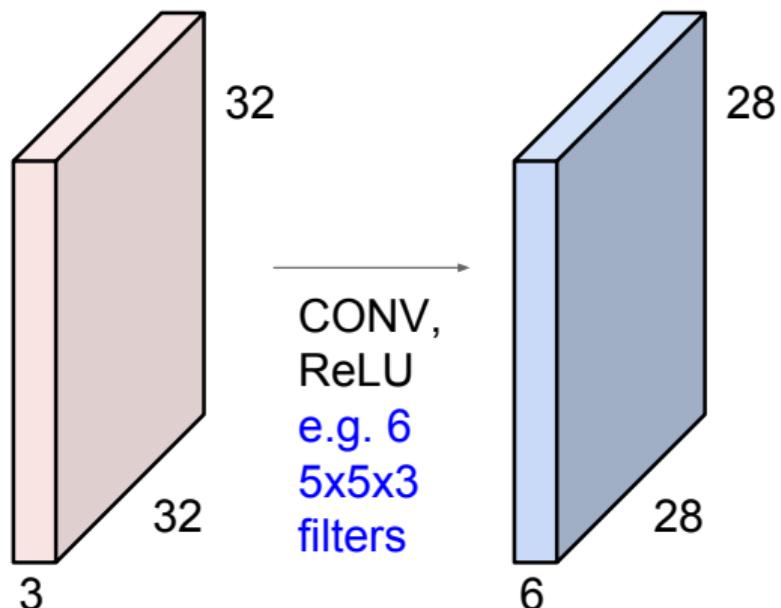

For example, if we had 6 5x5 filters, we'll get 6 separate activation maps:

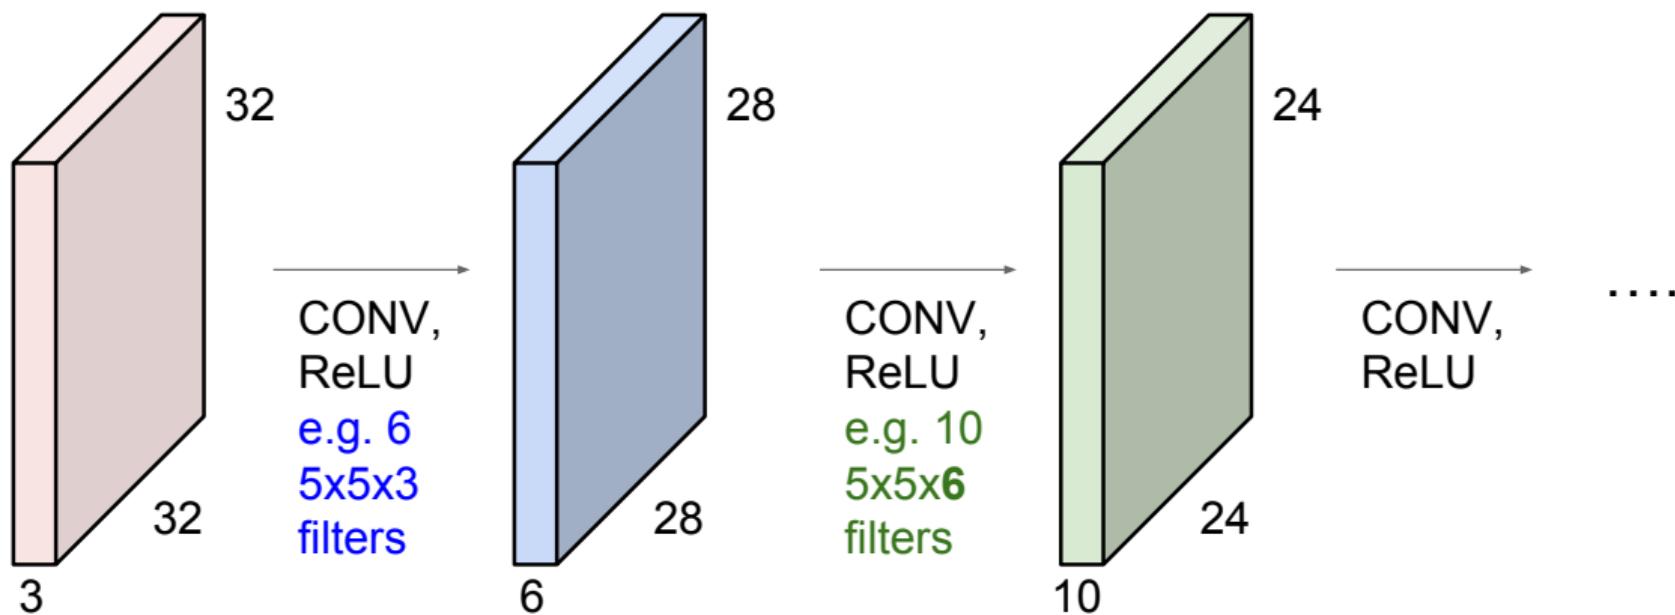

We stack these up to get a “new image” of size 28x28x6!

**Preview:** ConvNet is a sequence of Convolution Layers, interspersed with activation functions

**Preview:** ConvNet is a sequence of Convolutional Layers, interspersed with activation functions

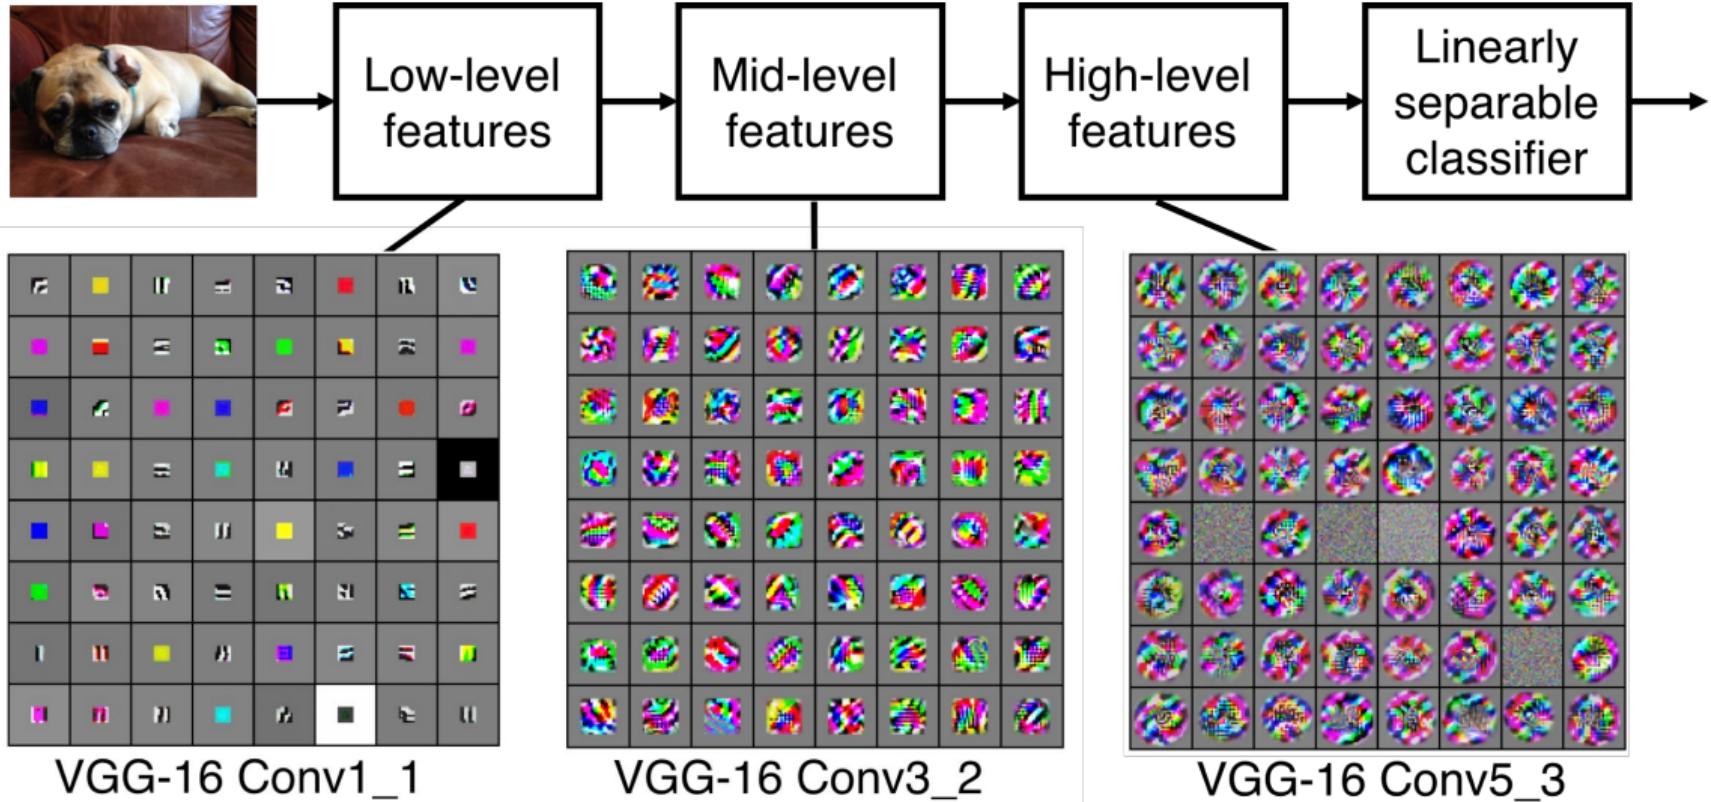

# Keras Convolutional Neural Network

```
3 model = Sequential()  
4  
5 model.add(Conv2D(6, (5, 5), activation='relu', input_shape=(32, 32, 3)))  
6  
7 model.add(Conv2D(10, (5, 5), activation='relu'))  
8
```
